DETAILED ACTION

Response to Arguments

Applicant's arguments, see Pre-Appeal Brief, filed 31 October 2008, with respect to the rejections of the claims under 35 U.S.C. § 103(a) have been fully considered and are persuasive. The rejections of the claims under 35 U.S.C. § 103(a) have been withdrawn. While the cited combination of Katsuo (US-5,721,883), Sugiyama (US-5,633,723) and Poon ("Performance Analysis of Median Filtering on Meiko™ – A Distributed Multiprocessor System", by K.M. Poon and N.H.C. Yung, *IEEE First International Conference on Algorithms and Architectures for Parallel Processing*, pages 631-639) largely teaches the system of claim I, and the cited combination of Katsuo and Sugiyama largely teaches the method of claim 81, in both cases the respective combination of references fails to teach the key feature of having a user specify a distribution of processing power *via* an user interface.

Allowable Subject Matter

Claims 1-118 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 1 recites a system for printing time-based media. The system includes a user interface, a printer and a processing device. The user, *via* a user interface, specifies a multimedia function to be performed on the time-based media and a distribution of processing power for carrying out the multimedia. The printer performs the first amount of processing specified by the user input and outputs to the processing device instructions to perform the second amount of processing specified by the user input. The processing device receives the instruction and performs the second amount of processing in accordance with the received instructions.

While some aspects of claim 1 are taught in the prior art, Examiner has not discovered specifically in the prior art the key feature of the user interface whereby a user specifies a first and second amount of processing, which is then relayed to the printer which in turn relays the second amount of processing to the processing device. The closest prior art is the previously cited combination of Katsuo, Sugiyama and Poon, which fails to teach the key feature of having a user specify a distribution of processing power *via* an user interface. The other previously cited references do not teach this key feature, nor has Examiner found any additional prior art which fully teaches the system recited in claim 1, either alone or by an obvious combination of references. Accordingly, claim 1 is deemed allowable.

Claims 2-80 depend from claim 1, either directly or indirectly, and are therefore also deemed allowable at least owing to their respective dependencies from an allowable claim.

Claim 81 recites a method for printing time-based media. Claim 81 contains the same allowable feature of receiving user input whereby a user specifies a first and second amount of processing, which is then relayed to the printer which in turn relays the second amount of processing to the processing device. Therefore, claim 81 is allowable for reasons similar to those presented above for claim 1.

Claims 82-118 depend from claim 81, either directly or indirectly, and are therefore also deemed allowable at least owing to their respective dependencies from an allowable claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
